2.3 Multiplication of Matrices	2
3 Linear Mappings	3
3.1 Mappings	3
3.2 Linear Mappings	3
3.3 The Kernel and Image of a Linear Map	3
3.4 Composition and Inverse of Linear Mappings	3
3.5 Geometric Applications	3
4 Linear Maps and Matrices	4
4.1 The Linear Map Associated with a Matrix	4
4.2 The Matrix Associated with a Linear Map	4
4.3 Bases, Matrices, and Linear Maps	4
5 Scalar Products and Orthogonality	5
5.1 Scalar Products	5
5.2 Orthogonal Bases, Positive Definite Case	5
5.3 Application to Linear Equations; the Rank	5
5.4 Bilinear Maps and Matrices	5
5.5 General Orthogonal Bases	5
5.6 The Dual Space and Scalar Products	5
5.7 Quadratic Forms	5

5.8	Sylvester's Theorem	5
6	Determinants	6
6.1	Determinants of Order 2	6
6.2	Existence of Determinants	6
6.3	Additional Properties of Determinants	6
6.4	Cramer's Rule	6
6.5	Triangulation of a Matrix by Column Operations	6
6.6	Permutations	6
6.7	Expansion Formula and Uniqueness of Determinants	6
6.8	Inverse of a Matrix	6
6.9	The Rank of a Matrix and Subdeterminants	6
7	Symmetric, Hermitian, and Unitary Operators	7
7.1	Symmetric Operators	7
7.2	Hermitian Operators	7
7.3	Unitary Operators	7
8	Eigenvectors and Eigenvalues	8
8.1	Eigenvectors and Eigenvalues	8
8.2	The Characteristic Polynomial	8
8.3	Eigenvalues and Eigenvectors of Symmetric Matrices	8
8.4	Diagonalizations of a Symmetric Linear Map	8
8.5	The Hermitian Case	8
8.6	Unitary Operators	8
9	Polynomials and Matrices	9
9.1	Polynomials	9
9.2	Polynomials of Matrices and Linear Maps	9
10	Triangulation of Matrices and Linear Maps	10
10.1	Existence of Triangulation	10
10.2	Theorem of Hamilton-Cayley	10
10.3	Diagonalization of Unitary Maps	10
11	Polynomials and Primary Decomposition	11
11.1	The Euclidean Algorithm	11
11.2	Greatest Common Divisor	11
11.3	Unique Factorization	11
11.4	Application to the Decomposition of a Vector Space	11
11.5	Schur's Lemma	11
11.6	The Jordan Normal Form	11

12 Convex Sets	12
12.1 Definitions	12
12.2 Separating Hyperplanes	12
12.3 Extreme Points and Supporting Hyperplanes	12
12.4 The Krein-Milman Theorem	12

Preface

Throughout this textbook, **logical formulas** are interpreted according to the following conventions:

- **Parentheses** have the highest precedence. For example,

$$(P \vee Q) \wedge R$$

is evaluated by first computing $P \vee Q$.

- The **logical connectives** are interpreted in the order

$$\neg > \wedge > \oplus > \vee > \implies, \iff > \iff$$

Hence

$$P \oplus Q \implies \neg R \vee S \wedge T \iff U \iff V$$

is understood as

$$((P \oplus Q) \implies ((\neg R) \vee (S \wedge T))) \iff (U \iff V)$$

- A **quantifier** binds the entire formula that follows it. Thus

$$\forall x, P(x) \wedge Q(x) \implies R(x)$$

means

$$\forall x ((P(x) \wedge Q(x)) \implies R(x))$$

- The symbol $\Downarrow$ is **not** a logical connective; it is used only to indicate the flow of a proof or an explanation. For example,

$$\begin{array}{c} P \\ \Downarrow \\ Q \end{array}$$

merely expresses that P is true, and therefore Q is true in the current discussion; it is not itself a proposition.

Chapter 1

Vector Spaces

1.1 Definitions

1.2 Bases

1.3 Dimension of a Vector Space

1.4 Sums and Direct Sums

Chapter 2

Matrices

2.1 The Space of Matrices

2.2 Linear Equations

2.3 Multiplication of Matrices

Chapter 3

Linear Mappings

3.1 Mappings

3.2 Linear Mappings

3.3 The Kernel and Image of a Linear Map

3.4 Composition and Inverse of Linear Mappings

3.5 Geometric Applications

Chapter 4

Linear Maps and Matrices

4.1 The Linear Map Associated with a Matrix

4.2 The Matrix Associated with a Linear Map

4.3 Bases, Matrices, and Linear Maps

Chapter 5

Scalar Products and Orthogonality

5.1 Scalar Products

5.2 Orthogonal Bases, Positive Definite Case

5.3 Application to Linear Equations; the Rank

5.4 Bilinear Maps and Matrices

5.5 General Orthogonal Bases

5.6 The Dual Space and Scalar Products

5.7 Quadratic Forms

5.8 Sylvester's Theorem

Chapter 6

Determinants

6.1 Determinants of Order 2

6.2 Existence of Determinants

6.3 Additional Properties of Determinants

6.4 Cramer's Rule

6.5 Triangulation of a Matrix by Column Operations

6.6 Permutations

6.7 Expansion Formula and Uniqueness of Determinants

6.8 Inverse of a Matrix

6.9 The Rank of a Matrix and Subdeterminants

Chapter 7

Symmetric, Hermitian, and Unitary Operators

7.1 Symmetric Operators

7.2 Hermitian Operators

7.3 Unitary Operators

Chapter 8

Eigenvectors and Eigenvalues

8.1 Eigenvectors and Eigenvalues

8.2 The Characteristic Polynomial

8.3 Eigenvalues and Eigenvectors of Symmetric Matrices

8.4 Diagonalizations of a Symmetric Linear Map

8.5 The Hermitian Case

8.6 Unitary Operators

Chapter 9

Polynomials and Matrices

9.1 Polynomials

9.2 Polynomials of Matrices and Linear Maps

Chapter 10

Triangulation of Matrices and Linear Maps

10.1 Existence of Triangulation

10.2 Theorem of Hamilton-Cayley

10.3 Diagonalization of Unitary Maps

Chapter 11

Polynomials and Primary Decomposition

11.1 The Euclidean Algorithm

11.2 Greatest Common Divisor

11.3 Unique Factorization

11.4 Application to the Decomposition of a Vector Space

11.5 Schur's Lemma

11.6 The Jordan Normal Form

Chapter 12

Convex Sets

12.1 Definitions

12.2 Separating Hyperplanes

12.3 Extreme Points and Supporting Hyperplanes

12.4 The Krein-Milman Theorem
